

Smart Healthcare - IoT for Energy Management & Sustainability

Talisen's IoT platform transforms healthcare facilities by making them compliant, comfortable and cost-effective places for both patients and healthcare professionals. The platform's Big Data analytics empower healthcare professionals make smarter decisions to improve patient experience.

Consolidating Data Sources:

Talisen's Enterprise Sustainability Platform (ESP) will gather, analyze, trend and generate views and reports for all your useful building facility data, helping to guide you to the buildings and systems that require the most attention.

- ▶ Monthly Utility Bill Data (energy consumption, energy costs, taxes, late fees, etc.)
- ▶ Building Facility Data (smart sensors, medical devices, air and water quality, etc.)
- ▶ Building Management Systems (BMS) and Smart Metering System Data

Visibility and Transparency:

Talisen's dashboards allow all levels of users to view the cost of operations as well as quickly analyze data from the building portfolio, mechanical systems or individual pieces of medical equipment. The web-based dashboards provide useful feedback for benchmarking and performance trend analysis that result in efficient utilization of available resources and support smart decisions to reduce the cost of operations.

Success Story:

The largest non-profit healthcare organization (U.S.) is using Talisen's platform to save \$8 million every year from their operational budget while improving the overall patient experience by having a closer control on their healthcare facility operations.

Comfort

ESP helps to monitor and maintain temperature and humidity levels in all occupied spaces.

Compliance

ESP helps to monitor and maintain temperature, humidity, pressure and air changes in operating rooms and critical spaces

Cost-Effective

ESP monitors and reports on data (i.e., utility bill, local meter, BMS) to reduce energy consumption, operations and maintenance costs.
